

Personal Website Lab

PDF HTML

October 2023

1 Introduction

This activity is going to be a bit less structured than the HTML activity in terms of what we tell you to do or add since CSS is about personalizing your website. We will encourage you to use CSS in a manner that will make your website appear both more visually appealing and more you. Try out the things on our checklist!

2 Checklist

Create a CSS file and add it to your existing html

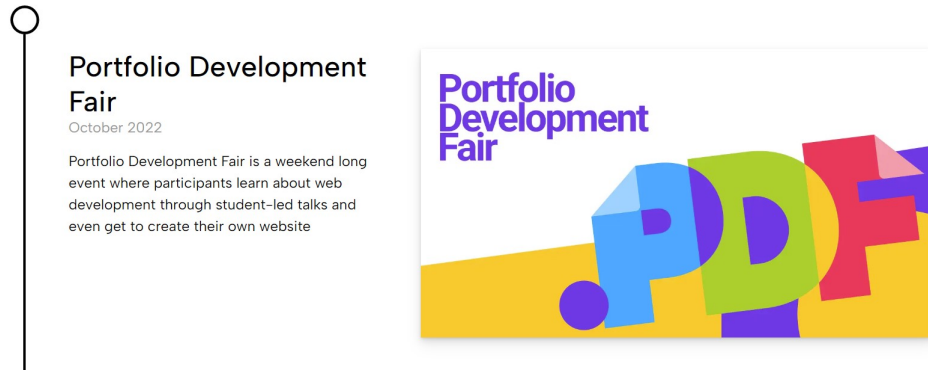

Add a picture of yourself and align it to your liking

Add an ‘About Me’ section, where you have a heading title and a paragraph body. Use classing to make the title bigger and the paragraph smaller

Add a background to part or all of your website. Make sure the color or image you chose doesn’t distract from the content

Add margins and borders around any section of your website that you want to stand out

Create a section on your web page that looks like the PDF website shown below. Which properties would be useful here?

Use the Bootstrap framework and add a header bar

3 Resources

Here are links to guides on bootstrap, alignment, and CSS libraries
